

# Engineering

Civil Engineers & Constructors (CEC) is a professional services firm specializing in civil engineering, structural engineering, environmental engineering, process engineering, and land surveying. Our engineering clients range from private companies to municipalities. CEC's licensed engineers can design a new project or develop sustainable solutions for one that already exists.

## Our Approach

We are contractors at heart, so everything we design is with the contractor in mind. This integrated approach gives our clients a critical advantage by reducing the delivery schedule and saving time and money by overlapping the project's design and construction phases. It also allows us to select the most appropriate project delivery method for the owner, contractors, third-party consultants, and the affected community members. We can work with any contractor or self-perform the work with our sister company, RP Constructors. Our team also employs licensed surveyors for pre and post-construction work, including 3D mapping.

## Types of Engineering

### ENVIRONMENTAL

Environmental engineering is defined by the Encyclopedia Britanica as "...the development of processes and infrastructure for the supply of water, the disposal of waste, and the control of pollution of all kinds..." CEC works in all areas of environmental engineering as a design/build contractor. Whether its potable water or wastewater, our engineers and construction professionals are highly experienced in the design and construction of both.

### STRUCTURAL

Concrete work comes in many forms. Concrete is used for slipform paving on highways and roadways, as cellular concrete to fill voids and provide insulation, and as structural concrete for structures such as lift stations, buildings, etc. Structural concrete is used in big applications to ensure the integrity of the project. It is used in vertical construction projects, erecting buildings, and horizontal projects like paving driveways and sidewalks.

### CIVIL

Traditional heavy-civil engineering construction projects require extensive knowledge of multiple construction techniques. While these projects benefit the communities they are in, they can take years to design and build. RP Constructors completes multiple scopes of work on heavy-civil construction projects such as grading, underground utilities and concrete paving. This fact alone helps us complete work in a timely manner—reducing impacts on the surrounding community.
